

R'PURE

Design by UNILUX in France

« R'PURE: Change positions. Change your life. »

IONISER SYSTEM

Efficient and ecologic

An air ionizer system is a device that uses high voltage to ionize (electrically charge) air molecules. R'PURE is used as an air ionizer to remove particles from

Air. This system is more efficient and ecologic than a traditional system (Filter HEPA+fan).

ERGONOMIC

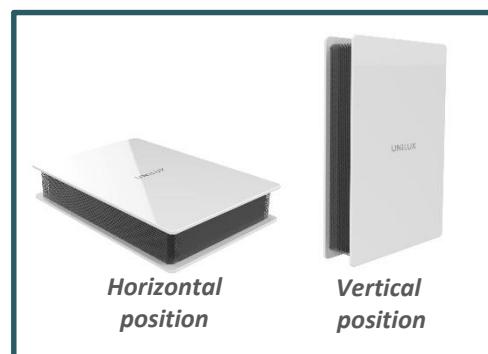

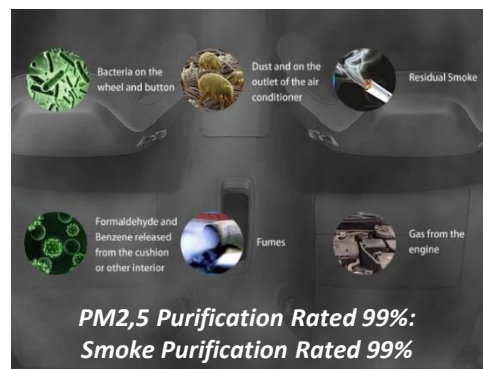

Health benefits

Carbon dioxide gas (CO₂) is a component of the earth's atmosphere. Although carbon dioxide is invisible and odorless, an increased CO₂ (>1000ppm CO₂ concentration guide) content in the indoor air leads to fatigue and reduces concentration for humans. This is the reason why UNILUX proposes R'PURE to optimize your well-being at the office (area surface efficient 10m²).

PRODUCT + POINT

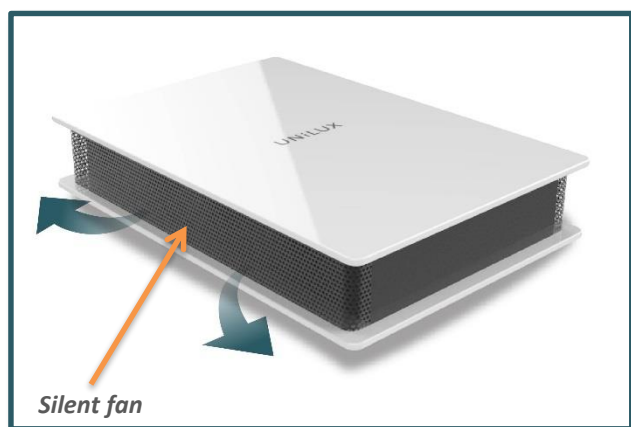

Compact product

With his small size, you can use R'PURE where you want and how you would like (Horizontal or vertical position).
