

- **Scandinavian style:** It's Scandinavian and refined style will fit in the office as well as at home.
- **Soft light:** The lampshade filters the light, making it light and soft, creating a comfortable environment.
- **Bamboo structure:** Each of the three legs is made up to two pieces that screw together easily
- **Easy to access:** the floor lamp has an easy to reach on/off switch
- **High quality material:** Made of natural bamboo, the legs of the lamp will not warp or break. The white fabric shade is simple yet elegant. The tripod design ensures stability, preventing the lamp from tipping over.
- **Bulb Supplied:** E27 LED bulbs supplied with the lamp. Bulb max 15W.
- **Installation and Packaging:** Quick installation with a few simple steps. You can finish the installation very quickly by following the installation manual.

- Warranty: 2 years
- Energy efficiency: class F (A to G spectrum)
- Height: 152 cm
- Materials: bamboo structure / fabric shade

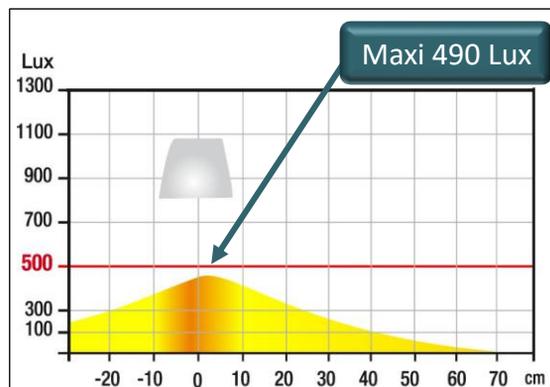

Replaceable (LED only) light source by an end-user

UNILUX'S ADVICES

1- Uplighter with indirect lighting: create a light atmosphere conducive to work

Due to their ease of installation and their decorative aspect, indirect lighting floor lamps are the preferred lighting for French people! This floor lamp is ideal for lighting a specific place in a room or even bringing the little decorative and original touch that will change everything in the atmosphere of the room. Thanks to its lighting directed upwards which will reverberate on the ceiling, this floor lamp generally ensures the function of secondary lighting, or mood and will provide you with high-performance and quality lighting. It integrates perfectly with all parts of your business:

- Individual office
- Open space
- Meeting room
- Passing places
- Lobby

However, you can supplement the lighting with a desk lamp.

2- The LED's Benefits

High quality and efficient lighting

Longer life

Energy saving

Eco-responsible purchase

Safe for the health

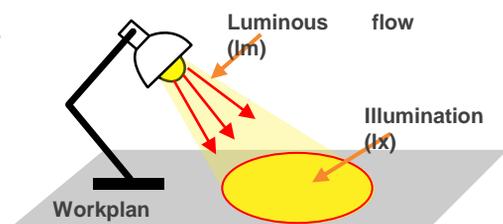

3- Some definitions

Illuminance (Lux)

corresponds to a quantity of light received by a surface. So:

- Φ : Luminous flux in lumen
- S: surface per m²

$$E = \frac{\Phi}{S}$$

Luminous flux (lm)

is defined by the sum of all the radiations emitted by the lamp. It is measured in Lumen, "lm" for short. It is defined from the energy flux (expressed in watts) more often termed radiated power.

The latter is a flow of radiated energy:

$$\Phi = \frac{Q}{t}$$

where Q is the radiated energy, expressed in joules (J) and t in seconds (s)

Luminous efficiency (lm/W)

corresponds to the luminous efficiency of the lamp. This value is established by the ratio between the luminous flux and the power consumed. It is measured in "lm / W". The higher the luminous efficiency, the higher the amount of light relative to the power consumed. This data is fundamental for the preservation of the environment since it allows us to reduce energy consumption for the same amount of light emitted.
